

**AzureAgent** is a software application for use by sales agents or people in charge of measuring sailing boats

## The Product

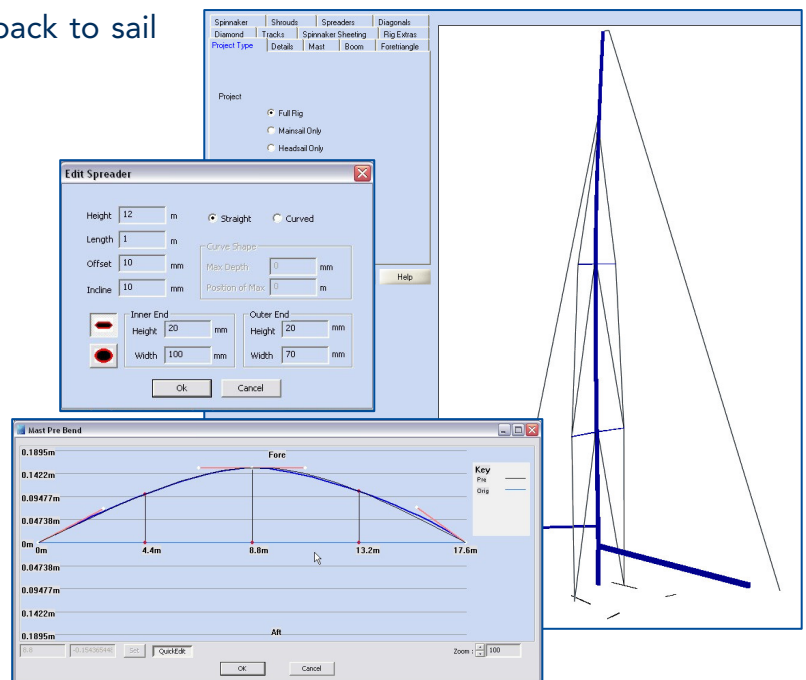

AzureAgent enables the smooth flow of data back to sail designers.

Thanks to its friendly graphical user interface, AzureAgent allows entering information about the Sail and all Rig/Boat details including:

-  Mast and Boom
-  Foretriangle(s)
-  Spinnaker hoist
-  Spreaders
-  Shrouds, Diagonals and Diamonds
-  Headsail Tracks
-  Spinnaker Sheeting

While information is entered, AZUREAgent produces a realistic 3D rig design in real time.

Measurements are saved in a file that can be sent to the designer. Then he/she can immediately develop a sail design that is consistent with the rig's features.

## How it works

AzureAgent can be purchased by the sail designer as an extension of the existing licence (any sail design software program sold by SMAR-Azure is compatible apart from AzureLite). Sail designers can redistribute AzureAgent software for free to their agents and/or customer via our web-site ([www.smar-azure.com](http://www.smar-azure.com)). AzureAgent can be installed on a pc or laptop. Having paid a small activation fee, sail designer will buy a fixed number of credits which will be used to import the files sent by their agents or customers with the rig information.

## Main Benefits

Simple and clear form based application

Suitable for small laptops

3D interactive view of Rig and Hull

Printing all data and comments

Data cannot saved until all critical info is entered

Avoid errors caused by misleading measurements

**As a result, sail design will be faster and simpler!**

### ABOUT SMAR AZURE

Dr Sabrina Malpede and Dr Alessandro Rosiello founded SMAR Azure in February 2001 to utilise the award winning technologies developed by Dr. Malpede during her doctorate.

Dr. Donald MacVicar joined the company in 2004 and since then has been enhancing the technology.

Our most recent development is SA Evolution – the most innovative integrated system for the optimization of fiber layout on the market today.
