

AzureViewer

AzureViewer simplifies and improves communication among sail-designers, their sales agents or resellers and their final customers.

Using AzureViewer, sail designers can share their design files with sales agents and resellers, including panel, patch and UV cover layouts, reefing points, battens, draft stripes, telltales, rig and hull.

With AzureViewer, the sales agent can review new designs and open/use them when meeting customers. The sails can be opened and visualised from any possible angle and perspective. If the file is lost or stolen, no vital information is lost.

AzureViewer can be purchased by the sales agent, the license is attached to the main design license. AzureViewer can be installed in many computers and works via a USB-dongle. The sales agent is able to download and install the identical version of AzureProject that the sail designer uses. The sales agent will not be able to save any file

MAIN BENEFITS

Sales agents and resellers can review the sail design and manufacturing details

It can be used for sales presentations and during boat shows without the risk of losing an expensive design dongle.

Files are shared via email to ease communication, improving customer relationships and customer satisfaction
