

AzureVision

AzureVision simplifies and improves communication between sail-designers and their customers, either directly or indirectly via professional and sales networks. This software tool allows viewing sail plans, rig, hull and every other detail in an interactive 3-dimensional window.

Using AzureVision, you can save a file containing the 3D renderings of single or multiple sails, including panel, patch and UV cover layouts, reefing points, battens, draft stripes, telltales, rig and hull.

With AzureVision, your customers can open and visualise the sails from any possible angle and perspective. AzureVision can also display sail-shapes (optimised using AzureProject), by adding in pressure maps and flying sail-shapes.

HOW IT WORKS

AzureVision can be purchased by the sail designer as an extension of the existing licence (any sail design software program sold by SMAR-Azure is compatible apart from AzureLite).

Sail designers can redistribute AzureVision software for free to their customers via our web-site (www.smar-azure.com). AzureVision can be installed on a PC or laptop.

MAIN BENEFITS

Free and unrestricted distribution to your customers, your competitors will never see your designs

Files do not contain any information about the geometry, shape or dimension of your sail design

Files can be saved and sent to customer via email

Improved customer relationships and enhanced customer satisfaction
