

Our new app AzureAgent is now released!

Introducing the new add-on tool for AzureProject - AzureAgent, this is designed to aid the process of gathering measurement data from the boat and avoid writing the information on bits of paper or duplicating data entry.

AzureAgent is an app running on Tablets to allow the entry of the rig information which can then be passed electronically to the sail designer. The app will automatically create a file in AzureProject with the necessary data.

Now available for Android, iOS and Windows platforms, to be downloaded from Apple and Android app stores. Recommended size of screen is 7" or above. Only compatible with AzureDesign and above (Annual or Perpetual Licence).

AzureAgent app

Tablet based app for rig data entry

- Capture all data first time, with automated validation and checking in the app.
- No need to enter data and copy thus avoiding mistakes.
- Complete traceability of measurements
- Save time and cost for sail designer, rig model built directly.
- Additional sail info directly available, avoiding costly delays while waiting on information
