2012 - Newsletter No.3 - July

## SMAR - Azure release a brand new version of AzureProject!!

In this new version of AzureProject we see some awesome new options for sail design, strengthened performance analysis capabilities and a greatly improved user experience

AzureProject is the integrated sail design software which allows sail designers to move effortlessly among all the various design, optimization and fibre layout phases.

The latest version of AzureProject adds some clever new options for shaping the mold of a sail. The user can now choose to add a section below the tack, extending the mold below the foot of the sail. The foot is then cut from the mold using the shape defined by the user in the 'foot curve editor'.

This image shows the improved results seen when using the new wake relaxation tools found in the new AzureProject

It is also now possible to include vector drawings on sails from simple DXF files. This method can be used for anything, from sail numbers to complex company logos.

The sail analysis tools have also seen some significant developments including improved and higher density mesh used for the aerodynamic and structural analysis of sailplans, and a quicker, more stable sail structural analysis solver to help calculate the flying sail shape.

AzureProject is modular software which can be purchased in its individual modules allowing the sail designer to acquire a software which meets their individual needs.

A J105 sailplan designed using AzureProject, this particular yacht was placed highly in the J105 Midwinter Races - US.

### What our customers think of AzureProject.....

"Last December we purchased AzureProject in order to update our sail designs. Since then we have seen a great improvement in the quality of our sails as well an ease in production. We would like to thank SMAR-Azure's team members not only for such a fantastic product but also for the technical support the have given us"

Pedro Gianotti -Uk - Halsey Houston

"When using the AzureProject tools, I have realised that I can produce so many wonderful sails. I would like to extend my gracious thanks to all the SMAR-Azure team and wish to express my gratitude for giving me the motivation needed to make such awesome sails! I look forward to more improvements with the software"

Travis Meindl - Ullman Sails- San Diego

"By using AzureProjects detailing functions you can save yourself valuable time and money. The details include.....telltale, camber strips, spreader marks, telltale windows, UV strips and reef slots these are all available to be marked on the sail. AzureProject includes some incredibly time saving functions which start to show in your profit margins almost straight away"

Chris Owen -Sail trim coach- Scotland
