

Please note that we will be closed on Good Friday and Easter Monday (14<sup>th</sup> – 17<sup>th</sup> April). **Happy Easter!**

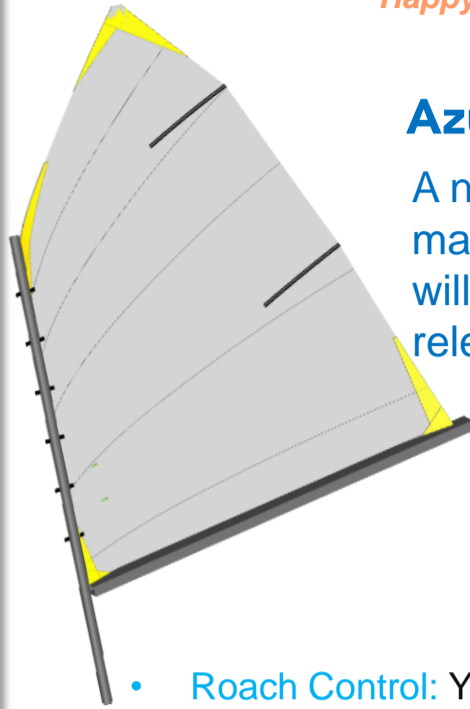

It's been a busy start to 2017 here at SMAR Azure!

First off, we are about to start working on our revolutionary new APP – **AzureAgent** – which will help AzureProject users to receive and process rig measurements and information with a single file straight from the AzureAgent App to AzureProject, avoiding errors and delays!

In addition, we have been improving our **AzureProject** software, with a brand-new version full of exciting new features about to be released this spring.

As always, we love hearing from our clients, so if you have any questions or comments, please don't hesitate to get in touch!

### AzureProject:

A new version with many novel features will be soon released.

Among the new features:

- **Battens on gaff sails:** It will now be possible to add and modify battens above the Throat for low aspect ratio gaff sails.
- **Roach Control:** You will now also be able to set the roach independently of the battens on any sail, so the roach curve remains unchanged by adding or deleting battens.
- **Chainplate:** As regards rig design, we have allowed the lower diagonal chainplate position to be set from the base of the forestay as well as the back face of the mast.

### AzureAgent – the App for all tablets

We are excited to introduce our new product: the AzureAgent app! Designed to facilitate the transfer of data between client and sail designer, AzureAgent not only speeds up the process but also helps to avoid misunderstandings caused by human error.

The app is easy to use and will be available for tablet or smartphone using Android, Windows or iOS.

If you would like to know more about AzureAgent or register your interest, please contact us. Release is forecast for this summer.

Azure Agent

[NestFab demo – CLICK HERE](#)

Now fully integrated with AzureProject, NestFab is an intuitive software which automatically nests panels quickly and efficiently. It has an excellent material utilization which helps you save cloth and money. This flexible programme allows you to specify placement angles and parts, as well as part priorities to achieve your desired nesting output. NestFab guides you through the nesting process, so no need for training. For more details and demo, see our website.

[RigEdge demo – CLICK HERE](#)

RigEdge is our innovative rig design software. Its analytical tools can be used to evaluate rig loads and tensions, calculate wind forces and mast bend or assess the potential performance of various designs. Allowing you to design rigging and sails quickly and easily, it also helps you to communicate with your clients. Please see our website for more details and a software demo.
