Thank You! - METS 2020

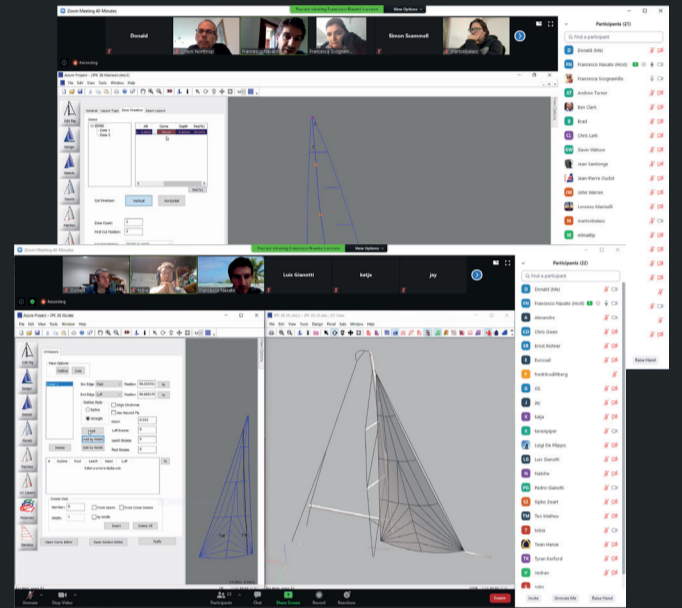

A massive Thank You to everyone that visited us at our virtual METS stand over the last week from all over the world by staying safe at home!

As always, it's been a pleasure to meet both long-time acquaintances and new people! We would like to thank for the effort made in connecting with us!

Virtual AzureProject Workshop & Usergroup

We want to extend a special **THANK YOU** to the attendees in our AzureProject workshop and Usergroup Meeting. Led by Donald MacVicar, SMAR Azure's CTO, and run by Francesco Nasato, the workshop **hosted more than 40 designers from 20 countries around the worlds**, offering the opportunity for open discussion on how to make better use of the software. This year, we also had as special guest Brad Stephens, our representative in Australia.

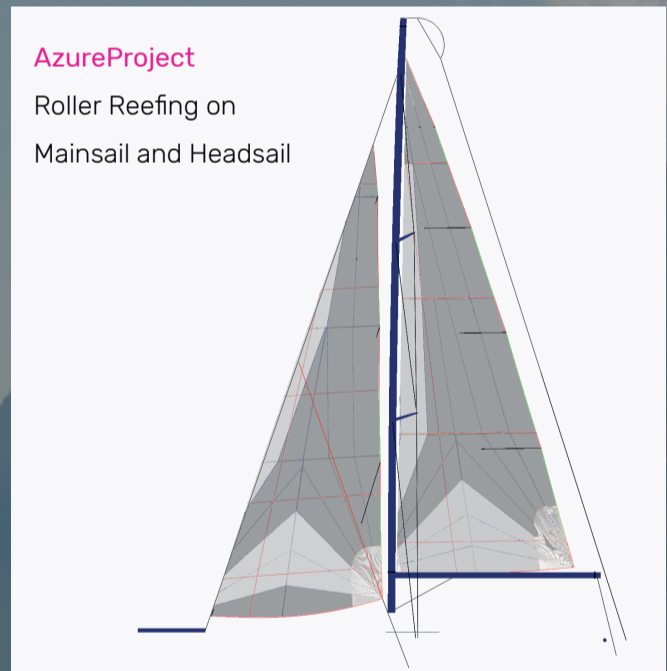

It was also a great opportunity to discuss the future direction of the software and any future features our customers would like to see implemented.

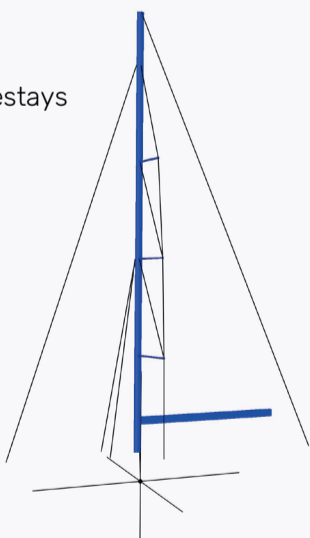

We have also released new versions of both AzureProject and RigEdge. Here are the new features available in the software:

AzureProject:

- Relative edit mode added for **gaff head curves**
- In **mast roller reefing** of mainsail options added.
- **Display of sheeting** lines on reefed headsails.
- **UV Covers** added to print out.
- Options to **adjust seam allowance** on a seam by seam basis.

RigEdge
Split Inner Forestays

RigEdge:

- Split **stay options** added to inner forestays
- **Halyard and outhaul** load in sail structural results
- **Options in include halyard** purchase system
- **Rig windage calculation** output using the desired heeling moment
